

Hybrid Facilitator

Triggers

My students alternate between in-person and online classes due to work schedules or unstable internet access.

Goals

To make hybrid learning seamless—so no student falls behind, whether they're logging in from a library or their phone or if they miss a session and need to catch up. To use tech—possibly AI to personalise lessons for diverse learners without losing the 'human touch' that builds trust. Creating transcripts and translations for recorded sessions without hours of editing.

Notes

Supports both online and in-person migrant learners. Good level of technology use already, is familiar with some common AI tools.

I need to know

Tried and tested tools that actually work to make subtitles and meaningful summaries.

Genuine time savers without detracting from the quality of teaching and learning.

I need to feel

Less overwhelmed by the huge choice of new tools. I don't want to be juggling platforms and testing out new products, I just want everything to work!

Intrinsic Motivations to learn

Modern lives are messy but with the right technology I can offer flexible opportunities to a diverse range of learners and that is exciting and worthwhile.

Extrinsic Motivations to learn

Work life balance - participation should be easier for my students but it shouldn't increase my stress levels or workload - if we get the tech right it should make my life easier. Also, I want to offer the best for my learners and hopefully inspire others, maybe even write up a case study, get something published, you never know.
